

• **OVERVIEW** • This fact sheet presents an analysis of the impact of the biopharmaceutical sector on the economy of Indiana (IN) in 2006, including data on employment, economic output, and research and development activity. The biopharmaceutical sector's economic impact includes not only the *direct* impact of its companies, but also the ripple effects that the sector has throughout the rest of the economy. These ripple effects include both the *indirect* impact, the economic value of the goods or services used to support biopharmaceutical companies, and the *induced* impact, the value of economic activity supported by the spending of direct and indirect employees of the biopharmaceutical sector.

• **SUPPORTING HIGH QUALITY JOBS** •

Employment – Biopharmaceutical companies supported a total of 89,763 jobs in Indiana in 2006 – 15,306 directly in the sector and 74,457 in other sectors. Of the jobs outside the biopharmaceutical sector, 45,670 were supported by biopharmaceutical activity within the state, while 28,787 were supported by biopharmaceutical activity in other states.

Wages and Personal Taxes – Direct biopharmaceutical wages in Indiana were estimated to be \$1.4 billion in 2006, resulting in an estimated \$350.3 million in federal taxes and \$43.3 million in state taxes.

Personal Taxes Paid per Direct Employee in IN, 2006	Federal	State
Biopharmaceutical Sector	\$22,887	\$2,827
Rest of Economy	\$5,656	\$937

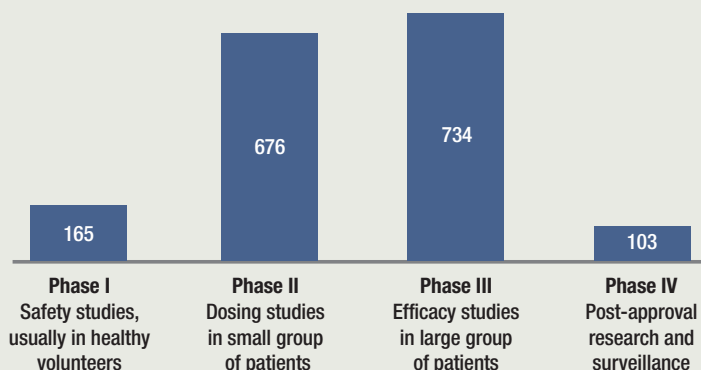

Note: Federal taxes include both income and Social Security taxes; state taxes include income taxes only.

• **CONTRIBUTING TO THE ECONOMY** • Economic output represents the value of goods and services produced by the sector and its ripple effects. In 2006, the Indiana biopharmaceutical sector supported \$22.7 billion in total output.

• **DEVELOPING TOMORROW'S MEDICINES** • In 2008, U.S. scientists and researchers were conducting 21,795 studies to develop medicines targeting cancers, rare diseases, and other important conditions. 1,922 of these trials were active in Indiana.

Active Clinical Trials in IN by Phase, 2008

Note: Values do not add to total number of trials due to omission of trials listed as Phase 0 (exploratory, first-in-human studies) and those with no phase specified.

Active Clinical Trials in IN by Selected Conditions, 2008

Selected Conditions	Number of Active Trials
Cancers and Other Neoplasms	862
Rare Diseases	280
Heart Disease	86
Respiratory Tract Diseases	61
Behavioral and Mental Disorders	48
HIV / AIDS	41
Diabetes	27
Alzheimer's Disease	15
Parkinson's Disease	7

Note: Some compounds may be studied for more than one condition. Listed conditions represent only a portion of all clinical trials active in the state.

• **INVESTING IN RESEARCH AND DEVELOPMENT** • Nationally, biopharmaceutical companies invested approximately \$44.9 billion in U.S. research and development in 2006, or \$65,381 per direct employee; additionally, the National Institutes of Health awarded an estimated \$22.8 billion in grants for medical research at universities and other research institutions across the nation.² **In Indiana, biopharmaceutical companies invested \$1.7 billion in R&D in 2006.** Other indicators of investment in Indiana biopharmaceutical research include:

Indicators of Investment in IN Biopharmaceutical Research, 2006

National Institutes of Health Dollars Awarded ³	\$213.5 million
Small Business Innovation Research (SBIR) / Small Business Technology Transfer (STTR) Dollars Awarded ⁴	\$5.1 million
National Science Foundation Dollars Awarded for Biological Science Research ⁵	\$18.0 million
Venture Capital Dollars Invested in Biotechnology ⁶	\$1.6 million
Planned Expenditures for New Academic and Biomedical Research Space (2006-2007) ⁷	\$120.0 million
Number of Bioscience-Related Degrees Conferred (Associates through Doctorate Level) ⁸	2,623
Number of PhD Degrees Conferred in the Biological, Medical, and Other Life Sciences ⁹	179

Methodology

Unless otherwise noted, the data presented in this fact sheet is based on original analyses conducted by Archstone Consulting. The analyses measured the absolute impact of the biopharmaceutical sector rather than its marginal impact. An absolute approach considers all economic activity (i.e., direct, indirect, and induced) that is attributable to a sector's presence; by contrast, a marginal approach acknowledges that a certain portion of this economic activity would still exist in the absence of that sector, and thus only measures the additional economic activity that is unique to the sector's presence in a given area.

Estimates of number of jobs and economic output were based on a multiplier effect analysis using Minnesota IMPLAN Group (MIG) software and 2006 data. 2006 was the most recent year for which the most complete set of data was available at the time analyses were completed. Number of jobs was used as a proxy for number of employees. Data on types of direct biopharmaceutical jobs was obtained from the Indiana Workforce Department, Research & Analysis (2007 Occupational Employment Statistics for NAICS codes 3254 and 5417), and is based on participating company-reported data. Employment growth was calculated from U.S. Bureau of Labor Statistics (BLS) data (1996 and 2006 Quarterly Census of Employment and Wages). Total wages were calculated from BLS employment and wages data and MIG employment data. Federal and state tax estimates were generated using BLS employment and wages data, MIG employment data, and National Bureau of Economic Research software (TAXSIM 8.0 Simulator). Data on clinical trials was based on participating The Lewin Group analysis of ClinicalTrials.gov data (downloaded in September 2008). Chart labels characterizing each clinical trial phase are shorthand and represent the typical case. Trials classified as in-between phases by ClinicalTrials.gov were grouped into earlier phase (e.g., trials listed as Phase I/II are shown as Phase I). National research investment per employee was estimated using Burrill & Company and PhRMA data (2006 R&D expenditures from PhRMA 2008 Pharmaceutical Industry Profile) and MIG employment data. Research investment per state was estimated using Burrill & Company and PhRMA data, National Science Foundation data (Survey of Industrial Research & Development estimates by state), and BLS employment data. When comparing the "biopharmaceutical sector" to "rest of economy," the latter is defined as all sectors combined less the biopharmaceutical sector.

Please note that totals may not be equal to the sum of individual components due to rounding. For more detailed methodology and complete source citations, see full report at <http://www.archstoneconsulting.com/biopharma>

Endnotes

¹ Indicates compound annual growth rate, which measures year-over-year growth during a multiple-year period. Job growth rates and 2006 job estimates were obtained from different data sources.
